1. Introduction

Skyzi Solutions Ltd is a company in Mauritius that offers pest control, hygiene services, building maintenance, and property management. The company has more than ten years of experience. It uses safe, eco-friendly methods to protect homes and businesses.

Skyzi Solutions helps customers deal with pests like rodents and termites, keeps buildings clean and hygienic, and helps manage and maintain properties. The company wants to give long-lasting protection and good service to every customer.

Today, customers want fast replies, easy access to information, and simple ways to book a service online. A good website can make customers happier and help the company run more smoothly.

This report looks at Skyzi Solutions' current website, points out the problems, and suggests simple, practical improvements that can make the website easier to use and more helpful for customers.

1.1 Mission and Vision

Mission

To protect homes and businesses from pests using eco-friendly and effective methods, while giving customers peace of mind through careful and professional service.

Vision

To become the top provider of pest control, hygiene, facility, and property management services in Mauritius, using eco-friendly solutions to create safe and clean spaces.

2. Research Aim and Objectives

2.1 Research Aim

The aim of this research is to look at Skyzi Solutions' current website and find ways that technology can improve how the company talks to customers and runs its services.

2.2 Research Objectives

1. Understand the services and daily work of Skyzi Solutions.
2. Look closely at the company's current website.
3. Find the problems that affect customer experience and service delivery.
4. Gather information through research and hands-on testing of the website.
5. Suggest simple, practical technology solutions.

3. Research Methodology

This research used two methods: primary research (testing the website directly) and secondary research (reading about industry trends).

3.1 Primary Research

The Skyzi Solutions website (www.skyzisolutions.com) was tested directly. The review looked at the services shown, how easy the site is to use, the information given about each service, and how customers can send an enquiry.

What We Found

- The website clearly shows the company's main services.
- It gives information on pest control, hygiene, maintenance, and property management.
- The pest control page lists different pests but does not explain their causes, risks, or how to prevent them.
- The hygiene page shows cleaning services but does not fully explain why each product or step is needed.
- The "request a quote" button was tested and does not work properly.
- The website does not tell customers what to do while they wait for a technician to arrive.
- There is a chance to improve how the company and customers communicate using simple automated tools.

3.2 Secondary Research

We also looked at the Skyzi Solutions website and general trends in the pest control and hygiene industry. Many modern service companies now use online quote forms, helpful service information, automatic appointment booking, and simple guides for customers. These tools help companies reply faster and keep customers happy.

4. Current System Analysis

4.1 Services Offered

Pest Control Services

Safe and eco-friendly treatment for rodents, termites, and other pests.

Hygiene Services

Cleaning and disinfection services that keep spaces healthy and safe.

Building Maintenance

Regular maintenance work that keeps buildings in good condition and prevents bigger problems later.

Property Management

Support services that help property owners maintain and protect the value of their property.

4.2 Current Website

Right now, the Skyzi Solutions website is mainly used to share basic information: the company background, the services offered, contact details, and pest control types. It does not yet have tools that help customers make decisions or book a service easily.

4.3 Strengths

- Over ten years of experience in the industry.
- A wide range of services under one company.
- A professional and consistent way of working.
- Use of eco-friendly and safe methods.
- Able to serve both homes and businesses.
- A clear and simple website layout.

5. Problem Statement

Skyzi Solutions offers great services, but its website has a few problems that make things harder for customers.

First, the website does not give enough details. For example, the pest control page shows pest names, but not their causes, warning signs, risks, or how to prevent them.

Second, the "request a quote" button does not work. This means customers cannot easily ask for a quote, and the company may lose potential business.

Third, customers who find a pest problem may not know what to do before a technician arrives. Simple guidance could help them stay safe and stop the problem from getting worse.

Fourth, once a quote is approved, booking the appointment still needs manual phone calls or messages between the customer, office staff, and technician. This takes time and can cause delays.

5.1 Key Findings

1. Customers do not get enough information; they see the service name but not what it involves, why it matters, or when they need it.
2. The website has few interactive tools to help customers choose the right service.
3. The quote request process does not work well and needs to be fixed.
4. Booking an appointment is still a manual process that can cause delays.

5.2 Areas to Improve

- Give customers more information about each service.
- Fix the online quote request form.
- Add simple guidance for customers before a technician arrives.
- Reduce manual work in booking appointments.

6. Competitor Analysis

To see how Skyzi Solutions compares to other companies, we looked at the websites of three strong competitors in Mauritius and compared them to Skyzi Solutions itself. In total, four companies are compared in this section: Skyzi Solutions and its three competitors. We focused only on website features, since this report is about improving Skyzi Solutions' digital system.

6.1 Competitors Reviewed

- Alpha Pest Management : a well-known company with over twenty years of experience, working across Mauritius, Rodrigues, and Madagascar.
- Hardy Henry Services : a long-running pest control and hygiene company known as an industry leader.
- Pest Control Mauritius : a newer company with a modern, easy-to-use website.

6.2 Comparison Table

Company	Online Quote Form	Service Information	Online Booking	Customer Guidance
Skyzi Solutions	Present, but not working	Basic, limited detail	Not available	Not available
Alpha Pest Management	Email or phone only	Good, detailed content	Not available	Not available
Hardy Henry Services	Contact form only	Good, engaging content	Not available	Not available
Pest Control Mauritius	Working quote form	Good, with FAQ section	Not available, fast reply promised	Some FAQ-style tips

6.3 What This Tells Us

- Even big, well-known competitors like Alpha Pest Management and Hardy Henry Services still use email or a simple contact form for quotes, not a full online system. So Skyzi Solutions is not far behind but its broken quote form is still a real problem that needs fixing first.
- Pest Control Mauritius has the strongest website. It has a working quote form, an FAQ section, and customer reviews, which help build trust.
- None of the three competitors offer full online appointment booking. If Skyzi Solutions builds this, it would be ahead of the market, not just equal to it.
- None of the three competitors offer a "what to do before help arrives" guide for customers. This is a simple, low-cost way for Skyzi Solutions to stand out.
- Alpha Pest Management and Hardy Henry Services both use helpful, detailed content to explain their services. This supports the idea of adding tooltips to the Skyzi Solutions website.

6.4 Where Skyzi Solutions Stands

Skyzi Solutions already offers more services under one company than any of these three competitors pest control, hygiene, building maintenance, and property management together. This is a real strength. But its broken quote form is currently a weak point compared to its competitors. By fixing this, and adding the new tools suggested in this report, Skyzi Solutions has a good chance to have the best website in the pest control and hygiene market in Mauritius.

7. Proposed System Improvements

We suggest four simple improvements. Each one solves a problem found in Section 5, and each one can be added to the current website without needing a completely new system.

7.1 Simple Info Pop-ups (Tooltips) for Each Service

A tooltip is a small pop-up box that appears when a customer clicks or hovers over a word or button. It shows extra information without leaving the page.

Pest Control Services

- What causes an infestation.
- Warning signs to look out for.
- Health and property risks.
- Simple prevention tips.
- Why professional treatment is recommended.

Hygiene Services

- What each product or tool is for, such as sanitisers, masks, and disinfectants.
- How each product keeps a space clean and safe.
- Where hygiene services are most useful.
- Why professional disinfection matters.
- A short explanation of the company's process: Investigate, Protect, Fortify, Report, Follow Up.

Building Maintenance Services

- Common building problems that need attention.
- Why regular checks matter.
- Benefits of fixing small problems early.
- How good maintenance protects a building over time.

Property Management Services

- What is included in property management.
- What Skyzi Solutions takes care of.
- Why professional management helps owners.
- How regular care increases property value.

Purpose: help customers understand each service, know when they need it, and see the value of using a professional.

How this can be done: this does not need a new website. A simple tooltip or pop-up feature can be added to the existing pages, using the service information the company already has. Most website platforms (such as WordPress or Wix) support this with a small plugin or a short piece of code.

7.2 A Working Online Quote Form

Problem: the current quote request button does not work, so customers cannot send a request online.

Solution: build a new, working quote form where customers can:

- Choose the service they need.
- Describe their problem.
- Upload photos.
- Share their location.
- Enter their contact details.

Each request should go straight to the company's staff for review.

Benefits: easier for customers, fewer lost enquiries, less back-and-forth, and faster replies.

How this can be done: the company does not need to build a form from scratch. The current form can simply be repaired, or replaced with a reliable and low-cost form tool (such as Google Forms or JotForm) connected to the company's email or WhatsApp Business number. This keeps the fix quick and affordable.

7.3 Simple Guidance for Customers Before Help Arrives

Problem: customers may find a pest problem before a technician arrives and not know what to do.

Solution: add a short guidance page that explains:

- What to do right away.
- Safety tips to follow.
- What to avoid doing.
- Simple steps to stop the problem from getting worse until help arrives.

Benefits: less damage, safer customers, and a better overall experience.

How this can be done: this is mainly new written content, not new technology. It can be added as a simple new page on the existing website, with no extra cost beyond writing and reviewing the text.

7.4 Automatic Appointment Booking

Problem: once a quote is approved, booking still needs manual calls or messages between the customer, office, and technician.

Solution: build a simple booking system that would:

- Receive the approved quote.
- Create a service request automatically.
- Tell available staff about the job.
- Share the customer's location.
- Set the appointment time.
- Send a confirmation message to the customer.
- Track how the job is going.

Benefits: faster service, better teamwork, fewer mistakes, and happier customers.

How this can be done: this does not need to be built from nothing. Ready-made booking tools (such as Calendly or Setmore) or a simple booking plugin on the website can handle appointments, send confirmations, and connect with staff calendars. This keeps the cost and effort realistic for a company of this size.

8. Recommendations

Based on this research, we recommend that Skyzi Solutions makes these improvements in the following order, starting with the biggest and most urgent problem.

- Recommendation 1: Fix the online quote form first. It is losing the company business every day it stays broken.
- Recommendation 2: Add the tooltip system to explain each service. Much of this content already exists and just needs to be organised.
- Recommendation 3: Add the customer guidance page. This is low-cost and something no competitor currently offers.
- Recommendation 4: Build the automatic booking system once the quote form is stable, since booking depends on requests coming in properly.

9. Implementation Plan

This plan is kept simple and realistic for a company of this size. Where possible, it uses ready-made, low-cost tools instead of building new systems from scratch. It assumes the company will work with a web developer or a small digital agency, and it does not require big changes to daily operations.

9.1 Steps and Timeline

Step	What Happens	Timeline	Who Is Responsible	Priority
Step 1	Fix the current quote form, or replace it with a simple, low-cost form tool (such as Google Forms or JotForm) linked to the company's email or WhatsApp.	Weeks 1–2	Web developer / IT support	Urgent
Step 2	Write simple tooltip text for each service and add it to the website using a small plugin or short code snippet.	Weeks 3–5	Marketing team / web developer	High
Step 3	Write and publish the customer guidance page. This is new content only, with no extra technology needed.	Weeks 4–6	Operations team / marketing team	Medium
Step 4	Set up a ready-made booking tool (such as Calendly or Setmore) or a booking plugin, connected to the quote form, so appointments	Weeks 6–10	Web developer / operations manager	High

Step	What Happens	Timeline	Who Is Responsible	Priority
	and confirmations happen automatically.			
Step 5	Test everything, train staff and technicians, and launch to customers.	Weeks 10–12	Management / all staff	High
Step 6	Collect customer feedback and improve the system over time.	Ongoing, from Week 12	Management	Medium

9.2 How to Measure Success

These simple measures can help the company check if the changes are working:

- How many quote requests are sent successfully each month.
- How long it takes to book an appointment after a quote is approved.
- What customers say about how easy the website is to use.
- How many phone calls are needed to arrange or confirm an appointment.

10. Expected Results

Better Customer Experience

Customers will find it easier to get information, get faster replies, and feel more supported.

More Efficient Operations

Automation will reduce manual work and help staff and customers stay coordinated.

Stronger Brand Image

A more helpful and modern website will build more trust with customers.

More Business Opportunities

An easier quote and booking process can turn more enquiries into paying customers.

11. Conclusion

Skyzi Solutions already has a strong reputation for pest control, hygiene, building maintenance, and property management. As customers expect more from company websites, improving the digital system will help the company communicate better, serve customers faster, and keep them happier.

This report suggests four simple improvements: helpful pop-up information for each service, a working online quote form, a guidance page for customers, and an automatic booking system. The competitor

review shows these changes would not only fix current problems but could make Skyzi Solutions the strongest option in the Mauritius pest control and hygiene market.

None of these changes need major shifts in how the company runs day to day. Together, they can greatly improve how customers use the website and how staff manage requests. By making these changes, Skyzi Solutions can build a stronger online presence, work more efficiently, and keep giving customers great service.
